

Better understand the benefits and business value of Cisco HyperFlex

If your 3-tier infrastructure struggles to support the needs of your modern business, it's time to consider Cisco HyperFlex – a scalable, cost-effective HCI solution that can provide the performance and agility you need in your data center.

In a recent survey, 73% of respondents¹ said they were considering, planning, or already implementing HCI...

Here are a few reasons why you should as well with Cisco's industry-leading hyperconverged platform.

1 Overcome challenges with traditional 3-tier infrastructure

HyperFlex helps collapse compute, storage, network, and management silos to move past maintenance-focused operations and allocate more time and budget to innovation.

- Deploy and manage traditionally siloed components as a single system.
- Reduce high infrastructure costs and react faster to business needs.
- Consolidate roles to focus on virtualization, compute, and storage at a generalist level.

2 Be ready for the distributed data center of the future

HyperFlex can ensure you'll be prepared for the future where the data center will become more distributed, and cloud/edge will play a more important role in IT.

- Replace your 3-tier infrastructure with flexible, hyperconverged "building blocks."
- Bring cloud-like agility and resource delivery to your on-premises infrastructure.
- Blend your core data centers, cloud services, and edge workloads in a seamless system.

3 Bring hyperconvergence to the core, cloud, and edge

HyperFlex addresses the shortcomings of other HCI offerings and was named as a leader in Gartner's Magic Quadrant for hyperconvergence.

- Deploy and support any app, in any cloud, anywhere – at virtually any scale.
- Scale compute and storage capacity independently as your needs change.
- Maintain performance with integrated data deduplication and compression.
- Take advantage of integrated functionality for provisioning, DR, encryption, and more.

4 Create real outcomes for both IT and the business

In a recent study, IDC found that organizations deploying HyperFlex can better support the business while also delivering more efficient, cost-effective IT operations².

- 452% ROI over a 5-year period.
- 50% lower 5-year cost of operations.
- 91% less unplanned downtime.
- 93% less staff time to deploy new servers.

Let IE modernize your data center with HCI

With Cisco HyperFlex, we can help you transition from "just keeping the lights on" to being more productive, agile, and ready for the highly-distributed data center of the future.

Expertise in translating business requirements into infrastructure solutions like Cisco HyperFlex.

Capabilities that span from data center design through implementation and support.

Detailed discovery process of current and desired states to ensure you achieve intended outcomes.

Is your data center infrastructure truly working for you?
